

SPS CCTV Security Tower

Advanced Rapid Deployment CCTV Tower

Wireless, temporary, effective

BSIA Compliant

Monitored 24/7

Our wireless CCTV tower is designed specifically to give an effective temporary CCTV solution. It's the ideal solution for construction sites, empty land and opens spaces.

It is easy to install, mobile, scalable and very importantly linked to our 24/7 monitored ARC for an immediate response.

The tower is rapidly deployable and gives you immediate savings on traditional static guarding.

Benefits

- Ideal solution to monitor occupied and vacant spaces
- Battery operated
- CCTV analytics
- Cost effective alternative to manned guarding
- Surveillance packages for crowd monitoring, fly tipping, traveller detection
- Cost effective, realise immediate savings
- Blended solution with guarding if required – all supplied by SPS

Features

- Battery Operated with minimum power consumption
- Multiple camera options
- Audible alerts
- Effective lighting
- 24/7 monitoring and recording
- Resilient
- Cost effective
- Thermal detection as well as traditional PIR detection

Features Continued

- Vandal resistant
- Tamper proof
- Lighting
- Works on 3G / 4G
- Easy to Handle
- Adjustable tower height
- Long range sensors
- Optional Speakers

The Modern CCTV Solution to today's Site Security Problems

The mobile CCTV tower is an all in one rapid deployable solution. The system contains 3G/4G mobile phone technology allowing signals to be sent to the SPS Alarm response centre, all cameras are recorded on site with the remote operator able to view the cameras live, playback and make instant decision on the level of response.

Technical Specification

Power options

The mobile tower can be powered via traditional mains power, Alternative power sources can also be used, gas, wind or solar.

CCTV Cameras

The tower comes with four fixed CCTV cameras providing high resolution images. The tower covers a full 360 degrees, on sites with no lighting the cameras have built in Infra Red lighting that can provide coverage up to 40M

Secure

The towers come with shock and vibration alarms, tamper detection alarms and secure communications via the SPS 4G. These options it provides one of the most secure solutions on the market.

PIR motion detectors

The four PIR detectors provides a full 360 degree detection range up to 15M from the tower. The detectors also have built in creep zones to stop people approaching the tower undetected.

Power supply alerts

Alerts can be sent to the alarm response centre when mains power fails, or low on alternative fuels.

Options

The following options are available for the towers

- ANPR (automatic number plate recognition) – with blacklists/hotlists
- PTZ cameras with or without IR
- Perimeter fence detectors 50M/100M
- Thermal imaging
