

I'm in IT

Under the GDPR, in order to maintain security organisations should evaluate the risks inherent in their processing activities and implement measures to mitigate those risks, such as encryption.

Those measures should ensure an appropriate level of security, including confidentiality, taking into account the state of the art and the costs of implementation in relation to the risks and the nature of the personal data to be protected.

In assessing data security risk, consideration should be given to the risks that are presented by personal data processing, such as accidental or unlawful destruction, loss, alteration, unauthorised disclosure of, or access to, personal data transmitted, stored or otherwise processed which may in particular lead to physical, material or non-material damage.

We can help you with:

- Cloud providers
- Cookies
- Privacy policies & notices
- BYOD
- Rights of erasure (the right to forgotten) and data portability
- International transfers of personal data
- Data sharing

And much more...
